

Welcome to the world of seamless payment integration where our firm focuses on Leveling the Paying Field™

DivDat's customizable Point of Service (POS) system offers flexible payment and account management options, empowering your customer service representatives with an invaluable tool, making it easy for consumer payments.

We can seamlessly refine how you currently handle payments or assist you in developing customizable methods.

Our team of expert engineers ensures that your integration into the DivDat Electronic Bill Presentment and Payment (EBPP) Solution is uncomplicated and effortless.

We provide highly flexible POS hardware solutions including HP-PCs, monitors, receipt printers, credit card readers, check scanners and a cash drawer.

The DivDat approach also gives any size financial or customer-service team a set of dynamic and real-time reporting and account resources.

Flexible Reports and Dynamic Administrative Tools

Our searchable administration tools include a variety of helpful reports such as transactions, scheduled payment and account activity, all with access to historical customer details.

An added feature allows backend AR and treasury systems to receive real-time payment postings and daily remittance files for accurate reconciliation.

Customers can create an online account to view real-time information, enroll in autopay or ebill, create profiles with credit/ debit cards or bank checking accounts, and schedule payments.

Your customers will also have the ability to access their complete statement and transaction history.
